Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Analysis of the Escherichia coli genome. V. DNA sequence of the region from 76.0 to 81.5 minutes.";

Nucleic Acids Res. 22:2576-2586(1994).

I. FUNCTION: PART OF THE BINDING-PROTEIN-DEPENDENT TRANSPORT SYSTEM BRANCHED-CHAIN AMINO ACIDS. PROBABLY RESPONSIBLE FOR THE THE SUBSTRATES ACROSS THE MEMBRANE.

-I- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. INNER MEMBRANE.

-I- SIMILARITY: WITH INTEGRAL MEMBRANE COMPONENTS OF OTHER BINDING-PROTEIN. DEPENDENT TRANSPORT SYSTEMS. BELONGS TO THE LIVHM
                                                                                                                                                                                                                                                                                                              Nazos P.M., Antonucci T.K., Landick R., Oxender D.L.; "Cloning and characterization of livH, the structural gene encoding a component of the leucine transport system in Escherichia coli.";

hypothetical protein F18B13.7 [imported] - Arabidopsis thaliana (Species: Arabidopsis thaliana (mouse-ear cress)
C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Spacession: C96B31
R;Theologis, A.; Ecker, J.R.; Palm, C.J.; Federspiel, N.A.; Kuul, S., While, O.; Alon ansen, N.F.; Hughes, B.; Huizar, L.
Nature 408, 816-820, 2000
A.Suthors: Hunter, J.L.; Jenkins, J.; Johnson-Hopson, C.; Khan, S., Khaykin, E.; Kim, C.A.; Li, Y.; Liu, S.X.; Liu, Z.A.; Luros, J.S.; Maiti, R.; Mirzia Rizzo, M.; Rooney, T.; Rowley, D.; Sakano, H.
A.Status: Salzberg, S.L.; Schwartz, J.R.; Shinn, P.; Southwick, A.H.; Sun, H.; Tallo A; Reference number: A86141; MulD:21016719
A; Reference number: A86141; MulD:21016719
A; Reterence number: A86141; MulD:21016719
A; Reterence type: DNAA
A; Molecule type: DNAA
                                                                                                                                                                                                                                                                                                                                        cytochrome-c oxidase (EC 1.9.3.1) fixN chain - Azorhizobium caulineduns
NiAlternate names: cb-type cytochrome-c oxidase 45K chain, cytochrome b410, 11431 g
C;Species: Azorhizobium caulinodans
C;Species: Azorhizobium caulinodans
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 10-Sep-199,
C;Accession: A55582; S42229
J. Bacteriol. 176, 2560-2568, 1994
A;Title: Functional analysis of the fixNoQP region of Azorhizobium caulinedins
A;Reference number: A55582; MUID:94222833
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A.Status: preliminary: nucleic acid sequence not shown; translation not shown A.Molecule type: DNA

                                                                                                                                                                                                                                 AABO8304-15 represent peptides which have an antiangiogenic effect. The specification describes therapeutically active compositions comprising at least one analogue of somatostatin (chosen from SOMI and SOMI), and at least four analogues chosen from vascactive intestinal peptide (VIP) 1 (a VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a Substance P antagonist), The combination of these 7 analogues is known as substance P antagonist). The combination of these 7 analogues is known as Spread by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits metastasis through its antianglogenic activity in all cancers. The peptides are useful for the treatment and prevention of angiogenesis, especially as a result of adenocarcinomas of the colon, breast, lung, prostate, kidney, leukemias or lymphomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating cancer involves administering chemotherapy agent conjugated to

The invention relates to a method of treating a patient suffering from cancer that comprises administering a chemotherapy agent conjugated to a peptide, or co-administering the agent and the peptide. The peptides can be selected from heparin binding domains of the thrombospondin protein. The method and compositions comprising the agent and the peptide are useful for treating a patient with drug resistant cancer, and for treating a patient with cancer to prevent drug resistance from occurring. Toxic chemotherapeutic agent can also be used, as peptide conjugation and co-administration can considerably reduce the toxicity of the agent and allow less composition to be administered due to increased efficacy. More effective treatment at lower doses is achieved by targeting the chemotherapy agents to the tumour cells. The present sequence represents bombesin/gastrin-releasing peptide receptor-recognising peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Caps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and amphibian bombesin, used for cancer treatment eg smail cell lung carcinoma, atherosclerosis and gastrointestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            C-terminal = ethylamide or amide. The peptide has an active site and a binding site for binding to trarget cell receptor, and has one of the following modifications:

(a) a deletion of a residue within the active site and a
a peptide or co-administering chemotherapy agent and the peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mammalian gastrin releasing peptide; amphibian bombesin; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New non-cyclic analogues of mammalian gastrin releasing peptide

0
                             On binding to its receptor, the analogue acts as a competitive inhibitor of the naturally occurring peptide but due to the modifications, fails to exhibit the normal in vivo biological activity. The peptides are useful for the treatment of benign or malignant proliferation of tissues, eg cancers of the gastrointestinal tract, pancreatic cancer, colon cancer, lung cancer or breast cancer, for the treatment of atherosclerosis; and disorders of the gastrointestinal tissues.
                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This peptide is a specifically claimed example of a generic formula. The C-terminal amino acid (Met) of the naturally occurring peptide has been converted to an amide and Phe 8 has been replaced by statine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New linear peptide analogues of bombesin - modified to eliminate biological activity while retaining receptor affinity, for treating cancer, diabetes, etc.
modification of a residue outside of the active site; and (b) a replacement of 1 or 2 residues within the active site with a synthetic amino acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The peptide is useful for treating benign or malignant tissue proliferation, artherosclerosis, gastrointestinal disorders and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This peptide is a specifically claimed example of a generic formula. The C-terminal amino acid (Met) of the naturally occurring peptide has been converted to an amide and Phe 8 has been replaced by beta-Leu.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New linear peptide analogues of bombesin - modified to eliminate biological activity while retaining receptor affinity, for treating
diabetes. They act as competitive inhibitors of natural peptides, since they bind to the cell receptors but have no biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The peride is useful for treating benign or malignant tissue proliferation, artherosclerosis, gastrointestinal disorders and diabetes. They act as competitive inhibitors of natural peptides, since they bind to the cell receptors but have no biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bombesin; litorin analogue; linear; receptor affinity; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The analogue may also be of a naturally occurring peptide terminating at the C-terminus with a Met residue, such as the 10 amino acid C-terminal region of mammalian GRP or amphibian

The C-terminal is amidated. The peptide is an example of a highly generic formula for bombesin antagonists which are [psi8-9 pseudo] nonapeptides contg. D- or L-tryptophan or tryptophan analog 2,3,4,9-tetrahydro-IH-pyrido[3,4-b]-indol-3-carboxylic acid (Tpi) at the N- and/or C-terminal.

The peptide is a bombesin/GRP (gastrin releasing peptide) antagonist and is useful for treatment of states of hypergastrinemia, e.g.. pernicious anaemia, chronic atrophic gastritis, Zollinger-Ellison syndrome and vitiligo, associated with diffuse hyperplasia of gastric enterochromaffin-like cells, and with an increased risk of developing multifocal gastric carcinoid tumours. The peptide can also be used to treat lung, colon and gastric cancers. posage is 1-1000 mircrog/kg parenterally.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nona:peptide bombesin antagonists - used for treating hypergastrinaemic states, such as pernicious anaemia and Zollinger-Ellison syndrome and also used against lung and gastric

The peptides are all analogues of either litorin; the 10 amino acid C-terminal region of mammalian GRP, neuromedin B or neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least partial agonists of the natural peptides. The peptide analogues are made by standard methods of see AAR14860-R14880 and AAR15035-R15040.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide agonists of litorin, gastrin releasing peptide -
neuromedin B or C or bombesin, for treating cancer, preventing
smooth muscle proliferation and suppressing appetite and alcohol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tissue proliferation; gastrin related peptide; peptide hormone

at the N- and/or C-terminal.

The peptide is a bombesin/GRP (gastrin releasing peptide) antagonist and is useful for treatment of states of hypergastrinemia. e.g. pernicious anaemia, chronic atrophic gastritis, Zollinger-Ellison syndrome and vitiligo, associated with diffuse hyperplasia of gastric enterochromaffin-like cells, and with an increased risk of developing multifocal gastric carcinoid tumours. The peptide can also be used to treat lung, colon and gastric cancers. Dosage is 1.1000 mircrog/kg parenterally.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The C-terminal is amidated. The peptide is an example of a highly generic formula for bombosin antagonists which are [psi8-9 pseudo] nonapeptides contg. D- or L-tryptophan or tryptophan analog 2,3,4,9 tetrahydro-1H-pyrido[3,4-b]-indol-3-carboxylic acid (Tpi)

The patent discloses (1) the peptide sequence of bombesin (UBUN), the patent releasing peptide (GRP), Neuromedin B or Neuromedin C, the peptide sequence having a chlorambucil group attached to the amino terminal; (2) a BBN receptor antagonist of formula R4-His-Trp-Ala-R1-R2-His-R3-C0-CH2CH3; and (3) a BBN receptor antagonist of formula R4-R8-R5-Trp-Ala-V41-R2-His-Leu-CO-CH1.

In these formulae, R1 = Val or Thi; R2 = Gly or D-Ala; R3 = Leu or Phe; R4 = N-acetyl, bromoacetyl, chloroacetyl, [bis(2-chloroethyl)].

C aminol-L-phenylalanine or a chlorambucil group; and R5 = Gln. His.

The compounds act as potent BBN/GRP-like peptide antagonists. Hey can be used to inhibit the growth of cells that are sensitive to the growth-promoting effects of BBN, GRP or a related peptide such as pancreatic cells, gastric cells, neurons, hypothalamic cells und cancerous cells or tumours. They can also be used to inhibit the bidding of BBN, GRP or a related peptide to cells capable of such
                                                                                                                                                                                                                                                                                                                                                             bromoacetyl, chloroacetyl, [bis(2-chloroeth, ) amin. |- L-phenylalanine or a chlorambucil group"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    binding. They can be used for treating e.g. peptic ulcer, pancreatitis, eating disorders, diabetes, acromegaly, enterocutaneous fistula, psoriasis, growth retardation, gastrointestinal motility disorders or tumours. The terminal structures of the compounds protect them from in vivo proteolysis and provide highly potent antagonist effects that persist for extended periods of time upon administration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New bombesin, gastrin releasing peptide or Neuromedin B or C derivs - antagonists for treating conditions such as gastrointesting

The invention relates to a new composition which comprises: (i) the somatostatin analogue SOM2 AGCKNFFGWKTPTSGC (3-14 disulphide bridge), and (ii) at least 4 of the peptides: antagonist of wasoactive.

and (ii) at least 4 of the peptides: antagonist of wasoactive.

intestinal peptide (VIP1): VIP receptor-binding inhibitor (VIP2); VIP receptor antagonist (VIP3); somatostatin analogue (SOM1): bombesin and substance P antagonist (SP1). Also claimed are more general compositions containing peptide analogues of somatostatin, VIP, bombesin and substance P. The compositions are used in human or veterinary medicine: (a) to kill (or inhibit multiplication of) tumour concercinoma of stomach, pancreas or prostate, or cancer of lung, breast, kidney or particularly rectum and colon, and (b) to prevent, bridge or modulate over-expression of, e.g. VIP. A wide range of cancer cells express receptors for VIP, somatostatin, bombesin and/or substance or The present sequence represents bombesin antagonist (BOM1).
                                                                                                                                                                                                                                                                                                                         Vasoactive intestinal peptide; VIP; antagonist; somatostatin; bombesin; Substance P; cancer; inhibition.

The binding is directly proportional to the transfer and expression of the therapeutic iene. Preferably, the TM is gastrin releasing peptide receptor (GRPr) A technique was developed to image GRPr expression using a 99m^Tc-labelled bombesin (BBN) analogue (the present sequence).
specification describes therapeutically active compositions comprising at least one analogue of somatostatin (chosen from SOMI and SOM2), and at least four analogues chosen from vasocative intestinal peptide (vi), 10 a VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP receptor antagonist), The combination of these 7 analogues is known as MuJ-7. By antagonist), The combination of these 7 analogues is known as MuJ-7. MuJ-7 is used as an anticancer drug to restrict tumour growth and spread by inhibiting tumour anglogenesis. MuJ-7, in addition, inhibiting peptides are useful for the treatment and prevention of angloticisis, especially as a result of adenocarcinomas of the colon, breast, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Monitoring therapeutic gene transfer and expression into a subject, by administering vector encoding the gene and gene for membrane expressed targeting molecule, and a radiolabeled ligand, and imaging gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transfer; gastrin releasing peptide receptor; GRPr;

Sequence

Novel therapeutically active composition comprising at least 5 peptides, useful for treating angiogenesis especially as a result of adenocarcinomas -

WPI; 2000-549083/50.

The present sequence represents an analogue of bombesin. The

The peptides are useful for the treatment of benign or malignant proliferation of tissues, eg cancers of the gastrointestinal tract, pancreatic cancer, colon cancer, lung cancer or breast cancer, colon cancer, lung cancer or breast gastrointestinal tissues.

```
inhibitor of the naturally occurring peptide acts as a competitive inhibitor of the naturally occurring peptide but due to the modifications, fails to exhibit the normal in vivo biological activity. The peptides are useful for the treatment of benign or malignant proliferation of tissues, eg cancers of the gastrointestinal tract, pancreatic cancer, colon cancer, lung cancer or breasi cancer; for the treatment of atherosclerosis; and disorders of the gastrointestinal tissues.

This peptide is a claimed example of a highly generic formula.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The peptide has an active site and a binding site for binding to a target cell receptor, and has one of the following modifications:

(a) a deletion of a residue within the active site and a modification of a residue outside of the active site; and (b) a replacement of 1 or 2 residues within the active site with a synthetic amino acid.

On binding to its receptor, the analogue acts as a competitive of the analogue acts as a competitive of the site with a synthetic amino acid.
